Experience

- Novo Nordisk (on Contract)** 04-Oct-2021 - 11-Jul-2022
Associate SDTM programmer
Prepared accurate and regulatory compliant SDTM submission packages in alignment with CDISC, FDA, and PMDA standards.
Developed trial specific aCRFs to ensure precise mapping of clinical data collection forms to SDTM datasets.
Maintained Define.xml and Define specifications, improving traceability, data usability, and reviewer understanding.
Conducted Pinnacle 21 compliance checks and resolved validation issues, ensuring datasets met CDISC submission standards.
Reviewed and prepared external data specifications to enable seamless integration of lab, device, and eCOA data into SDTM datasets.
Created cSDRGs to provide transparent documentation and study context for regulatory reviewers.
Performed QC and User Acceptance Testing (UAT) of SDTM datasets using SAS programming, ensuring compliance with GCP, GPP, and SOPs.
Managed and integrated data from EDC systems (Inform), medical devices, central labs, and patient questionnaire.
Generated submission ready SDTM and XPT datasets in SAS, maintaining high standards of data integrity and regulatory acceptance.
Collaborated with Biostatistics and Clinical teams to understand data collection rationale, clarify study requirements, and ensure accurate dataset mapping.
- Novo Nordisk** 11-Jul-2022 - 18-Nov-2025
Clinical data programmer
Experience - I Worked as a Clinical Data Programmer with expertise in Oracle DMW and SAS to generate raw and SDTM datasets aligned with CDISC standards.
 - Designed and built DMW transformations based on annotated CRFs to convert raw clinical data into SDTM format.
 - Utilized SQL and PD scripts within DMW for data mapping, transformation, and quality assurance.
 - Collaborated with Biostatistics and cross-functional teams (Safety, Medical Writing, Clinical Data Scientists) for blinding strategies and validation processes.
 - Used LSH (Life Sciences Hub) to manage validation check programs and DMW package deployment.
 - Ensured data accuracy and consistency through validation, review, and coordination with trial level stakeholders.

Education

- KIT College Kolhapur Maharashtra India** 2016-2021
Biotechnology Engineering

Skills

- Programming: SAS,R (Basics) SQL
- Tools: Oracle DMW, Life Sciences Hub (LSH)
- Standards: SDTM, CDISC

CAREER SUMMARY

- Motivated SDTM Programmer / Clinical Programmer with hands-on experience in SDTM dataset generation, CDISC standards compliance, and clinical data transformation using Oracle DMW, SAS, SQL, and LSH.

At Novo Nordisk, contributed to multiple therapeutic areas—including Rare Diseases, Diabetes, Cardiovascular,

Kidney, and Alzheimer's Disease—by delivering high-quality, standards-driven clinical datasets. Seeking to advance further as an SDTM Programmer / Clinical Data Programmer, leveraging my expertise in data governance, SDTM implementation, regulatory submission readiness, and cross-functional collaboration to ensure strong data integrity and successful regulatory outcomes.

EXTERNAL DATA EXPERIENCE

- Worked on various data domains including Laboratory (LAB), Imaging, Questionnaire, Pharmacokinetics (PK), Antibody (AB), and Diary data.
 - Designed and configured DMW models and transformations to ensure SDTM compliance across external data sources.
 - Prepared external data specifications and guidance documents to ensure integration and submission readiness.

PROFESSIONAL CERTIFICATIONS

- Certification in Clinical Research – Clini India, Pune
- Certification in GCP – National Institute of Drug Abuse
- Certification in Base SAS Programming – Eduvercity, Bangalore
