Summary

Certified Veeva Study Builder Professional, bringing over 7 years of combined experience in clinical data programming and strong foundation in Veeva Study Build, eCRF design, SDV configuration, edit check programming, and clinical data automation.

Core Competencies

- eCRF design
- Veeva study configuration
- Event and visit schedule setup
- Edit check programming
- Protocol amendment implementation
- Data export/import definition management
- Creating Veeva CDB listings, checks, and queries
- SDTM mapping
- Data transformation
- GCP
- CDISC
- Veeva study build
- Oracle DMW
- LSH
- SQL
- Python
- SDTM
- EDC configuration
- UAT validation

Experience

01/2022 - Current

Senior Clinical Data Programmer, **Novo Nordisk**

- Designed and built clinical databases in Veeva Study Build, ensuring compliance with Data Management (DM) requirements.
- Created eCRFs as per protocol and DM specifications; configured event schedules, and dynamic visit setups for study milestones.
- Developed and implemented edit checks in Veeva for automated data validation and consistency control.
- Managed SDV plan assignments and integrated them with event configurations for site-level execution.
- Supported protocol amendments, incorporating design and logic changes, while ensuring system traceability and version control.
- Defined and maintained export/import definitions within Veeva for seamless data flow between EDC and CDB.
- Configured Veeva CDB, developed listings, checks, and automated queries to support data review and reconciliation.
- Supported the trial team for Veeva CDMS implementation for early adopter Veeva trials as the process implementation lead.
- Worked as the Implementation Lead for data review and data governance process creation.
- Collaborated with data managers and programmers to ensure end-to-end data integrity and database readiness.
- Performed metadata mapping from EDC to CDW/DMW, generating SDTM-compliant deliverables.
- Worked on post-production changes as per CR requirements.
- Performed OQ and PQ testing as part of the system validation lifecycle to ensure regulatory compliance and system reliability.

- Supported lines of business in trial-related activities as part of the Agile team.

06/2018 - 12/2021

Software Developer System Analyst, **Accenture India Pvt Ltd**, Bengaluru

- Created specifications and transformations using models, using Oracle DMW and LSH.
- Designed and set up the study database across multiple therapeutic areas.
- Executed data conversion pipelines and supported integration between legacy and modern CDMS platforms.
- Developed reusable programming logic for clinical data extraction and validation.
- Created LSH package and custom programming using PLSQL.
- Worked on validation checks programming.

Clinical Systems/Tools

- Data Management workbench(DMW)
- Veeva EDC/CDB
- SQL Developer
- Toad

Education

06/2017

Bachelor Of Engineering (BE), Information Science And Engineering
Saptagiri College Of Engineering, Bengaluru
