CLINICAL DATA PROGRAMMER

Results-driven Clinical Data Programmer with 5 years of experience supporting global Phase I–IV trials across obesity, diabetes, oncology, and rare disease therapeutic areas. Proficient in designing and deploying compliant clinical databases, programming edit checks, and mapping data to SDTM standards. Skilled in EDC setup (Veeva, Central Designer), metadata integration, and standard development. Adept at collaborating with cross-functional teams to ensure audit-ready, inspection-compliant deliverables. Recognized for improving data quality, accelerating trial go-live timelines, and contributing to process optimization in both CRO and sponsor environments.

KEY SKILLS

Clinical Data Management: Veeva (eCRF Design, Study Build, CDB Programming), Central Designer, Inform Architect, External Data Ingestion, DMW, CDW, CDISC (SDTM, CDASH), Annotated CRF (aCRF), Edit Check Programming

Programming: SQL, SAS, R, VBScript, Python, C, C++, HTML

Data Integration: Metadata and clinical data mapping to DMW/CDW, SDTM Dataset Mapping, Controlled Terminology alignment

Tools: MEDML Installer, Jupyter (basic), MS SQL Server, ServiceNow, MS Office Suite

Project Management: Study Build Coordination, Stakeholder Communication, UAT & QC Oversight, Risk Assessment, Inspection Readiness

Soft Skills: Strong verbal and written communication, Team mentoring, Escalation handling, Proactive problem-solving, Quality-focused mindset

CAREER HIGHLIGHT / ACCOMPLISHMENTS

- Recognized for **accelerating trial go-live timelines** and **strengthening SDTM mapping accuracy**
- Collaborated with Clinical Trial Development Managers, Standards Developers, SDTM Programmers, and Oracle Argus Safety teams to interpret clinical study protocols, define study requirements, and align on project timelines.
- Developed and implemented clinical data standards across trial phases to ensure end-to-end **data consistency, quality, and regulatory compliance** from CRF design to ADaM outputs.
- Utilized tools such as CDW, MMA, SmartChart, StudyBuilder, UNIX SCE, and COSMOS to design, review, and finalize study standards, **aligning trial setups with Novo Nordisk (NN) standards**
- Collaborated with cross-functional teams during trial setup, protocol review, and metadata creation, generating and maintaining Protocol Metadata Documents (PMD) and supporting digital trial integration.
- Actively participated in PST, GST, and IG meetings, supporting **CRF standard library implementation, risk mitigation, and efficient standardization** of data collection processes across studies

PROFESSIONAL EXPERIENCE

NOVO NORDISK

Jan 2024- Oct 2025

Clinical Data Programmer

- Designed and activated study databases using Central Designer, ensuring protocol compliance and stakeholder alignment across global Phase I–IV trials.
- Programmed and validated trial-specific edit checks, dynamic checks, display overrides, and calculation rules to ensure high-quality data collection.
- Led end-to-end testing and documentation of database functionality, including UAT review, pass/fail scenario tracking, and post-production updates.
- Mapped clinical data and metadata from source systems to DMW/CDW, generating SDTM deliverables aligned with CDISC/CDASH standards.
- Conducted impact assessments for global and trial-specific data standards (CRFs, Controlled Terminology, SDTM), supporting regulatory readiness.

- Collaborated with internal teams (TDMs, Biostatisticians, Global IT, Centralized Monitoring Unit) and external partners (CROs, vendors) to resolve technical issues and align on trial setup.
- Supported PSTs with end-to-end data flow expertise, ensuring consistent mapping and setup across clinical systems.
- Performed QC using UAT reports, resolved issues in liaison with Lead CDP, and ensured database readiness prior to production deployment.
- Maintained compliance with SOPs, GCP, GDP, and GPP, contributing to audit readiness and data integrity.
- Designed and configured study databases for clinical trials involving diverse data sources (EDC, Vendor, eSource), including those with minimal or non-standardized metadata.
- Integrated, mapped, and transformed heterogeneous data into the Data Review Model (DRM) and CDISC SDTM structures, ensuring regulatory compliance and data consistency.
- Developed external data specifications for images, digital endpoints, and lab results, converting them into CDASH/SDTM-compliant formats.
- Utilized tools such as CDW, MMA, SmartChart, StudyBuilder, UNIX SCE, and COSMOS to design, review, and finalize study standards, aligning trial setups with Novo Nordisk (NN) standards

ACCENTURE

Oct 2020- Dec 2023

Senior Clinical Data Programmer

- Designed eCRFs using Inform Architect and programmed edit checks using XML and VBScript aligned with protocol requirements.
- Deployed forms and edit checks via MedML Installer; validated functionality using Inform Browser and prototype servers.
- Created Central/Medical coding files and IDTS specifications for IVRS integration; resolved related help desk cases.
- Led UAT and production deployments, managing post-production changes through validated UAT/PROD packages.
- Supported external data capture systems using XML and ensured inspection readiness through documentation and audit compliance.
- Reviewed protocol specifications against standard libraries to ensure quality before form and edit check development.
- Conducted KT sessions for new developers, sharing expertise on tools, processes, and quality best practices.

EDUCATION

Bachelor of Engineering, Information Science | Visvesvaraya Technological University (VTU), Karnataka, | CGPA:8.04 | 2020

TRAININGS/CERTIFICATIONS

Veeva certificate (Study Build)

AWARDS

- **Core Value Champion award, Accenture:** Achieving 99% quality in UAT for my first EDC trial setup
